

Vestigo® Chain of Custody

Enhancing Investigational Product Management

Enhance IP Handling with Advanced Barcode Technology

Vestigo® transforms Investigational Product (IP) management by seamlessly tracking each transfer and transition from start to finish. Utilize our advanced barcode-scanning technology for accurate documentation of prescription preparation, dispensing, storage, transportation, and administration.

Key Benefits

Enhanced Visibility: Gain a comprehensive overview of IP movement throughout the medication-use process.

Streamlined Compliance: Effortlessly track crucial metrics like preparation, delivery, receipt, and administration times, including temperature and personnel verification. Secure access allows accurate documentation of prescription handling for both Vestigo and non-Vestigo users.

Optimized Efficiency: Leverage digital workflows for data reporting and collection at essential stages, enhancing efficiency and standardization.

Paperless Convenience: Eliminate the need for paper logs, promoting a more sustainable and efficient process.

Protocol Adherence: Effectively fulfill specific protocol requirements for IP preparation, dispensing, storage, and administration.

Empower Your Workflow

Tailored Processes: Customize each workflow to suit your requirements by defining necessary steps and data collection points.

Seamless Tracking: Easily access a secure portal by scanning the Chain of Custody barcode, where you can choose your workflow step and enter the required information. Each barcode uniquely identifies a prescription and its workflow needs.

Comprehensive Documentation: Access a complete history of Chain of Custody within Vestigo or generate detailed reports for in-depth analysis of drug management activities across the facility, protocol, and patient levels.

Enhance your investigational product management with Vestigo's Chain of Custody solution. Embrace efficiency, compliance, and visibility while maintaining the highest standard of care.
