

CASE STUDY

Transforming Clinical Study Management with Vestigo®

A leading healthcare institution in the Midwest faced significant challenges managing over 300 clinical studies using traditional paper-based processes. These outdated methods led to manual documentation errors, time-consuming workflows, and inefficient resource utilization. To address these issues, the institution implemented Vestigo, a comprehensive clinical trial management and IDS system.

Key Challenges

- ✓ **Manual Documentation:** Time-consuming and error-prone processes for managing drug receipts, dispensing, and destruction.
- ✓ **Labor-Intensive Billing:** Manual end-of-day drug charges for each study often led to missed charges, increasing the risk of billing errors.
- ✓ **Space Constraints:** Physical documents occupied substantial storage space.
- ✓ **Slow Information Retrieval:** Retrieving study data from physical documents could take up to a week.

The Vestigo® Solution

In October 2015, the institution transitioned to Vestigo. Some features of Vestigo they implemented include:

- Electronic Documentation
- Automated Billing Invoices
- Space Optimization
- Quick Data Access

Key Outcomes

- 1 Time Savings**
83% reduction in documentation time, and up to an 85% decrease in physical workbook usage across two major sites within the healthcare system.
- 2 Streamlined Monitoring Visits**
Remote access to data eliminated the need for onsite visits, saving time and travel costs.
- 3 Space Savings**
One site reduced workbook and binder space by 83%, and another site saw a 78% reduction.

Vestigo® Impact

Vestigo has not only resulted in significant cost savings by eliminating the need for long-term physical storage but has also optimized our operational efficiency by reducing workflow inefficiencies. This improvement allows us to focus more on our primary objective: enhancing patient care.
