

Vestigo® Barcode Validation

Enhancing Safety, Accuracy, and Compliance in Your Clinical Trials

Vestigo® Barcode Validation ensures the right Investigational Product (IP) is dispensed every time, reinforcing patient safety and compliance while streamlining clinical research workflows. By validating barcodes before preparation or dispensing, we introduce a layer of protection that makes the dispensing process not only more efficient but also more reliable and compliant.

Benefits of Vestigo Barcode Validation

Guarantee Accuracy:

Confirm the correct IP is chosen for dispensing, significantly improving patient safety.

Protocol Compliance:

Facilitate adherence to protocols with detailed electronic documentation of each physical product verification.

Enhanced Workflow Efficiency:

Streamline your product verification process for better accuracy.

Regulatory Adherence:

Enhance compliance with comprehensive electronic records of all product verifications.

Vestigo Barcode Validation Process

1

Receive and Label IP

Generate and affix a barcode label to the Investigational Product.

2

Update Protocol Order in Vestigo

- Specify if the Investigational Product requires barcode validation.
- Configure workflow settings as needed.

3

Physically Pull IP

- Process the prescription.
- Print necessary labels for dispensing.

4

Perform Barcode Validation

- Access the Barcode Validation feature within Vestigo.
- Scan the Investigational Product to verify accuracy.

Use of the barcode validation feature has reduced the risk of making picking errors for studies with IP that has hard to read item IDs or studies in which the IP has item IDs that appear very similar.
