

## Vestigo® IT Support Overview

# Minimal IT Resources Needed for Implementation

Vestigo® is a SaaS solution hosted by McCreddie Group, requiring minimal local IT setup. Here's what to expect:

### No Local Database or Services Required:

Vestigo® is entirely cloud-based, eliminating the need for on-site infrastructure.

### User-Friendly Configuration:

McCreddie Group manages the setup and provides configurable options accessible directly through the user interface.

### Secure Browser Access:

Supported on recent versions of Edge, Chrome, and Firefox.

### Authentication Flexibility:

Vestigo® includes built-in Okta authentication and can integrate with Single Sign-On (SSO) as needed. Integration can be implemented at any stage based on organizational policies.

### Optional Label Printing:

A site-to-site VPN is required only if label printing is desired. Vestigo® is compatible with most existing EHR label printers. Report printing will utilize your desktop device settings.

### "IT Lite" Solution:

Many tasks, such as protocol setup, are typically handled by investigational drug service personnel, minimizing involvement from EHR or other IT resources.

### Project Management Support:

McCreddie Group's project management team collaborates closely with on-site project managers for smooth implementation.
