Clinical Trial Management System (CTMS) Interface

Streamline Your Clinical Trials:
Integrate Your CTMS with Vestigo®

Discover the power of seamless integration with the Vestigo® CTMS Interface. This cutting-edge feature enhances your clinical trial management by automating data synchronization between your CTMS and Vestigo. Experience real-time updates on protocols, contacts, and participant information, ensuring your trial data is always current and accurate.

Key Features

1 Automated Updates:
The interface dynamically refreshes Vestigo with the latest information from your CTMS, ensuring you are promptly informed of new enrollments, status changes, or updated participant demographics.

2 On-Demand Sync:
In addition to scheduled updates, you have the autonomy to trigger data synchronization as needed, maintaining full control over the process.

3 CTMS Alerts:
Stay proactive by receiving immediate notifications regarding enrollment changes and updates to participant profiles directly within the Vestigo platform.

Key Benefits

Enhanced Efficiency:
Directly integrate protocol, contact, and subject data from your CTMS into Vestigo, eliminating redundant data entry and optimizing operational processes.

Improved Compliance:
Seamlessly manage accurate prescriber and contact details, ensuring adherence to regulatory standards with ease.

Increased Safety:
Mitigate manual data entry errors through automated data transfer, ensuring the consistency and reliability of participant data.

Better Participant Care:
Expedite participant enrollment and enhance inventory management with real-time status updates, enhancing the quality of care provided.

> The CTSM interface with Vestigo has made us more efficient by reducing the amount of redundant, manual inputs into various research-related databases.
